Continuation of 10. Other: The prior art teaches the composition of the claimed invention and it is inherent that a complex forms in composition comprising a mixture of therapeutic component and an efficacy enhancing component. There is nothing in the application that defines what that complex is, a covalent bond or ionic bond or association of drug/therapeutic agent and the fatty acid or anionic polymer. Applicants' argument is not persuasive. Is there a reason why a therapeutic agent would not form a complex with the efficacy enhancing component in the prior art and a complex forms between a therapeutic agent and an efficacy enhancing component in the application.
